

## Punchlist Manager™

Homebuilder Service and Warranty Tools

### Integrated with your preferred financial software

Punchlist Manager integrates with most job-costing applications, ensuring a seamless back office infrastructure. Common fields and data are synchronized to eliminate time and human error. As new information is entered in your existing systems, it updates to Punchlist Manager – so your team can focus on customer service rather than data entry.

#### Punchlist manager currently supports:

- Sage 300
- Sage 100
- Custom Applications
- MS NAV
- Many others

Don't see your preferred application on the list? Not to worry. We can synchronize with many custom and other ODBC-compliant applications. Typically, if we can access your data, we can provide some level of integration.
