

Punchlist Manager™

Homebuilder Service and Warranty Tools

Dramatically improve customer satisfaction and reduce costs of quality control.

The construction world is complex, where juggling contractors, warranties, municipal requirements, and owner requests is no small feat. And even a small misstep can mean upsetting customers or losing on future homes.

Punchlist Manager simplifies and smoothes the entire process. Communicate online with homeowners and trades at all times. Manage open, closed, and pending requests and service work orders in real time. And always know where your field technicians and your trade partners are scheduled for inspection and repair.

Keep your team – and customers – up to date

- Send automated notifications and alerts
- Capture signatures
- Take pictures
- Complete inspection and quality control checklists
- Schedule trades in the field
- Grant owners access to pictures, documents, and status in the homeowner portal
- Grant vendors access to work orders, scheduling, and purchase orders in the homeowner portal

Accounting integration

Punchlist Manager integrates with many accounting applications to reduce data entry and human error. As new information is entered in your existing systems, it's updated in Punchlist Manager, so your team can focus on warranty management and customer service rather than data entry.

Punchlist Manager integrates with

- Sage 300
- Sage 100
- Custom applications
- MS NAV
- Many others
